Water Service Line Inventory Update

The Borough of Fleetwood is continuing efforts to complete its Service Line Inventory (SLI) and identify the materials of water service lines throughout the Borough. This inventory is part of federal requirements for public water systems to identify service line materials and provide this information to customers.

As part of these efforts, the Borough will be working with Electro Scan and its Swordfish technology to investigate a selection of service lines where the material is currently unknown.

What is Swordfish?

Swordfish is a specialized technology used to identify buried water service line materials without digging or excavation. Using low-voltage electrical resistance technology, Swordfish can identify different pipe materials within a service line, including copper, galvanized, plastic, and lead.

You can learn more about Swordfish and how the technology works on Electro Scan's website.

How Can Residents Help?

You can play an important role in helping the Borough complete its Service Line Inventory:

- Complete the Borough's online Service Line Inventory survey. Information provided by residents can help the Borough identify the material of service lines throughout the community.
- Watch for a Swordfish door hanger. Properties selected for a Swordfish investigation will be chosen at random.
- If you receive a door hanger, please respond to schedule an appointment. Your participation will allow Swordfish crews to investigate your service line and help the Borough fill gaps in its inventory.

Thank you for your cooperation as the Borough continues working to complete its Service Line Inventory.

Facebook

Fleetwood Borough is continuing efforts to identify water service line materials throughout the community — and **residents can help**!

- Complete the Borough's online Service Line Inventory survey.
- Keep an eye out for a **Swordfish door hanger**. Properties will be selected at random for additional investigation.
- If you receive a door hanger, please respond to schedule an appointment.

Please visit the Borough's website to learn more.
